1. About

Considering the present static website of NECBDC(<https://necbdc.org.in/>), we aim to develop a dynamic website in which regular web content updates can be done. These updates may be any events, training, project reports, news articles, other documents and reports, advertisements, press releases, and other media content on various pages. Earlier the site was entirely managed by the external developer team/the third party. We also seek to make the new responsive website that will be compatible with different devices like desktops, tablets or mobiles. The website will also be able to cater to various social media platforms to connect people. Aesthetic is the first thing any user notices. Thus we will focus on our design to make the different components of the website, like the photo gallery & video gallery, attractive. It would be more user-friendly. We have a focus on the UI/UX of the website too. There will also be new features like a custom search option where users can select the different options for search. For all this, we plan to use the MERN stack. For admin, we aim to make it more friendly so that the admin can update and alter changes in the website without the help of the developers, which will eventually reduce the cost.
